Summary

Cybersecurity Analyst with hands-on experience in SOC operations, threat hunting, and incident response within a U.S. Department of Energy high-security environment. Graduate from the Georgia Institute of Technology with concentrations in Cybersecurity and Cloud Computing. Skilled in SIEM monitoring, detection engineering, digital forensics, and adversary TTP analysis. Passionate about reverse engineering malware and developing proactive defenses to harden systems and protect critical data. Experienced in both team-driven security operations and individual investigations within highly regulated environments. Eager to continue contributing to mission-driven organizations protecting assets in an evolving threat landscape.

Experience

Fluor Marine Propulsion, LLC (FMP) - Naval Nuclear Laboratory (NNL) | West Mifflin, PA

February 2024 – Present

Cybersecurity Analyst – Security Operations Center (Bettis Laboratory)

A U.S. Department of Energy contractor supporting the Naval Nuclear Propulsion Program (NNPP) in a high-security environment.

- Monitor and triage security events using IBM QRadar and Microsoft Sentinel across classified and unclassified networks.
- Investigate and respond to incidents involving data loss, unauthorized access, malware, and forensic analysis.
- Conduct proactive threat hunting and intelligence analysis to identify IOCs and adversary TTPs aligned with MITRE ATT&CK.
- Develop and tune SIEM rules and alerting logic to reduce false positives and improve detection accuracy.
- Automate routine SOC tasks using PowerShell and Power Automate to enhance operational efficiency.

Mastercard | Remote

Summer 2024

Cyber Security Analyst Intern

A global technology company in the payments industry, providing secure and innovative payment solutions for consumers worldwide

- Identified security gaps across business processes and implemented enhanced training protocols.
- Analyzed security incidents, such as phishing attempts, and conducted threat hunting across systems.
- Collaborated with cross-functional teams to establish secure authentication procedures for payment transactions.
- Aided in drafting incident response plans for potential breaches, reducing response time by 20%

Education & Certifications

Georgia Institute of Technology | Atlanta, GA

January 2020 – May 2024

Bachelor of Science in Computer Engineering, Honors

Concentrations: Cybersecurity and Distributed System & Software Design

Google Cybersecurity Certificate

May 2023 – August 2023

CompTIA Security+

May 2024

Projects

Reverse Engineering Malware Project:

Spring 2024

The aim of this project was to gain hands-on experience in reverse engineering and analyzing a variety of malware samples to understand their behavior, attack mechanisms, and potential impact on systems.

- Reverse-engineered and analyzed real-world malware samples, including Michelangelo.1, DOS-7, SQL Slammer, Lucius, and Harulf, to understand their code, structure, and functionality.
- Utilized tools such as IDA Pro and OllyDbg to analyze binaries, identify payload functionality, and assess attack vectors.
- Compiled detailed reports on the characteristics of each malware, including attack vectors, payload delivery, and potential mitigation strategies.

Skills

Cybersecurity: IBM QRadar, Microsoft Sentinel, Security Information and Event Management (SIEM), Data Loss Prevention (DLP), Incident Response (IR), Digital Forensics (host & mobile), Threat Hunting, Threat Intelligence, Malware Reverse Engineering, Obfuscation Analysis, Anti-Debugging Techniques, Memory Analysis, System Log Forensics, Information Spills, Identity and Access Management (IAM), Threat Modeling, NIST Cybersecurity Framework, Maintaining Privacy & Compliance

Programming: Java, C, C++, Python, KQL, SQL, Assembly, Verilog, VHDL, Software Debugging, AWS Cloud Computing, Linux,

Software: Altera Quartus II, NI LabVIEW, GitHub, Wireshark, MATLAB, Security Information and Event Management (SIEM) tools

Cloud Computing: AWS, Database Management, Spark, MapReduce, Hadoop, DevOps, Machine Learning and AI, Cloud Security

Communication: Technical reports, instruction manuals, presentations, incident responses
