DOE Q Clearance (Active)

Summary

Active DOE Q Clearance holder with 2+ years of hands-on SOC experience in a classified U.S. Department of Energy environment. Georgia Tech Computer Engineering graduate with a Cybersecurity concentration, experienced in SIEM operations (IBM QRadar, Microsoft Sentinel), detection engineering, incident response, and malware reverse engineering. Seeking Cybersecurity Analyst, SOC Analyst, Malware Analysis, or Incident Response roles in the Atlanta metro area.

Experience

Fluor Marine Propulsion, LLC (FMP) - Naval Nuclear Laboratory (NNL) | West Mifflin, PA

February 2024 – Present

Cybersecurity Analyst – Security Operations Center (Bettis Laboratory)

A U.S. Department of Energy contractor supporting the Naval Nuclear Propulsion Program (NNPP) in a high-security environment.

- Triaged and resolved an average of 50+ security incidents daily across 11,000+ endpoints in classified (**IBM QRadar**) and unclassified (**Microsoft Sentinel / Defender XDR**) environments, improving detection accuracy and response efficiency.
- Led operational management of **Trellix (FireEye) File Protect**, securing cross-domain file transfers between classified and unclassified networks by detecting and quarantining potentially malicious files.
- Analyzed and supported incident response investigations involving malware infections, unauthorized access, data exfiltration, and insider threats, adhering to digital forensics and chain of custody procedures; administered and tuned **Proofpoint** DLP policies to detect and prevent data loss across email and endpoint channels.
- Conducted proactive threat hunting using the **MITRE ATT&CK Framework**, identifying adversary TTPs and translating threat intelligence feeds into actionable detections and structured hunt queries.
- Engineered and tuned SIEM and EDR detection rules in **Microsoft Sentinel** and **Microsoft Defender XDR**, reducing false positives and improving alert fidelity across endpoint and network telemetry.
- Automated SOC workflows using **PowerShell** and **Power Automate**, increasing operational efficiency and reducing manual analyst workload in alert triage and response processes.

Projects

Applied Malware Analysis (IDA Pro | OllyDbg):

Spring 2024

Independent research applying static and dynamic analysis techniques to dissect real-world malware families across boot sector, network worm, and trojan categories.

- Disassembled and analyzed 5 real-world malware samples (**Michelangelo.1, DOS-7, SQL Slammer, Lucius, Harulf**) across multiple families including boot sector viruses, worms, and credential-stealing trojans; mapped execution flow and identified key functions using **IDA Pro**.
- Executed dynamic analysis in isolated VM environments using **OllyDbg** to step through runtime execution, detect and bypass anti-debugging techniques, and observe live interactions with the file system, registry, and memory.
- Captured and analyzed C2 communication patterns and data exfiltration attempts using **Wireshark**; inspected binary obfuscation and encryption schemes via hex editor (**ImHex**) to reverse-engineer payload delivery mechanisms.
- Produced per-sample threat reports detailing infection vectors, persistence mechanisms, payload triggers, and mitigation strategies; findings documented with annotated screenshots and assembly code snippets.

Education & Certifications

Georgia Institute of Technology | Atlanta, GA

January 2020 – May 2024

Bachelor of Science in Computer Engineering, Honors

Concentrations: Cybersecurity and Distributed System & Software Design

Google Cybersecurity Certificate

May 2023 – August 2023

CompTIA Security+

May 2024

Skills

Security Operations: IBM QRadar | Microsoft Sentinel | SIEM Operations | Endpoint Detection and Response (EDR) | Data Loss Prevention (DLP) | Identity and Access Management (IAM) | NIST Cybersecurity Framework | Incident Response (IR) | Detection Engineering | Vulnerability Management | Microsoft Defender XDR | ServiceNow | Security Clearance (Active DOE Q)

Digital Forensics & Malware Analysis: Digital Forensics | Malware Reverse Engineering | IDA Pro | OllyDbg | Memory Analysis | Obfuscation Analysis | Anti-Debugging Techniques | System Log Forensics | Chain of Custody | Wireshark | Ghidra | ImHex

Threat Intelligence & Hunting: Threat Hunting | Threat Intelligence | MITRE ATT&CK Framework | IOC Analysis | Adversary TTP Analysis | Threat Modeling | Information Spills

Languages & Scripting: KQL | Python | PowerShell | Java | C | C++ | SQL | Assembly | Verilog | VHDL | Linux | GitHub
